

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A lens sheet for a screen comprising at least one layer~~or at least two layers~~, adapted for use in combination with ~~other~~ another lens sheet,

wherein the layer in contact with said ~~other~~ another lens sheet is being formed of a thermoplastic resin, said thermoplastic resin having a universal hardness of 31.0 to 42.0 N/mm²,

wherein, when the lens sheet for a screen has a single-layer structure, said thermoplastic resin has a water absorption of not more than 0.2%, and when the lens sheet for a screen comprises two or more layers, a relationship represented by $\alpha_1 - \alpha_2 > 0.1\%$ is satisfied, where α_1 represents the water absorption % of the thermoplastic resin constituting the layer in contact with said another lens sheet, and α_2 represents the water absorption % of the resin constituting the remaining layer(s).

2. (Currently Amended) The lens sheet for a screen according to claim 1, wherein said thermoplastic resin has a compression modulus of elasticity of 1600 to 2500 MPa and a maximum deformation quantity of 2.0 to 2.7 μm as measured by a creep test.

3. (Previously Presented) The lens sheet for a screen according to claim 1, wherein said thermoplastic resin has a loss tangent at -20°C of not less than 0.04 and an elastic work ratio of not less than 70%.

4. (Canceled)

5. (Canceled)

6. (Previously Presented) The lens sheet for a screen according to claim 1, wherein said thermoplastic resin composition comprises a copolymer of methyl methacrylate, styrene and butadiene rubber, and the content of said methyl methacrylate and styrene is not less than 20% by weight based on said copolymer.

7. (Previously Presented) Use of a lens sheet for a screen according to claim 1 as a lenticular lens.

8. (Original) A projection screen comprising a lenticular lens according to claim 7 and a Fresnel lens.

9. (Previously Presented) A thermoplastic resin for use in a lens sheet for a screen according to claim 1, said thermoplastic resin having a universal hardness of 31.0 to 43.0 N/mm².

10. (Original) A thermoplastic resin according to claim 9, which has a compression modulus of elasticity of 1600 to 2500 MPa and a maximum deformation quantity of 1.95 to 2.7 μm as measured by a creep test.

11. (Previously Presented) The thermoplastic resin according to claim 9, wherein said thermoplastic resin has a loss tangent at -20°C of not less than 0.04 and an elastic work ratio of not less than 70%.
